

Product Requirements Document (PRD)

1. Product Overview

The AI Career Assistant is a web-based chatbot designed to help users with career guidance, resume suggestions, and interview preparation using an AI language model.

2. Objective

Build and deploy a minimal viable AI-powered chatbot application on AWS that demonstrates full-stack development, LLM integration, and cloud deployment.

3. Target Users

Students, fresh graduates, and job seekers looking for career advice, resume help, and interview preparation.

4. Problem Statement

Many students lack access to personalized career guidance and struggle with resumes and interviews.

5. Solution

A chatbot that provides instant AI-generated career advice, resume tips, and interview questions.

6. Core Features (MVP)

- Chat interface for user queries
- AI-generated career guidance
- Resume bullet suggestions
- Interview question generation

7. User Flow

User opens app → types question → backend sends request to LLM → response displayed in chat.

8. Tech Stack

Frontend: HTML, CSS, JavaScript

Backend: FastAPI (Python)

LLM API: OpenAI or Claude

Deployment: AWS App Runner with Docker

9. Functional Requirements

- Accept user input via chat
- Send request to backend API
- Backend securely calls LLM API
- Return AI-generated response

10. Non-Functional Requirements

- Responsive UI
- Secure API key handling using environment variables
- Low latency responses

11. Deployment Requirements

- Dockerized application
- Hosted on AWS (App Runner / Elastic Beanstalk)
- Public URL accessible

12. Success Metrics

- Application runs without errors
- Responses generated successfully
- Accessible via public AWS link

13. Future Scope

- Resume upload analysis
- Job matching system
- User authentication
